

ABSTRACT OF THE DISCLOSURE

A system and a method for providing devices within a home network with a service. The system is connected to a home network in which a plurality of devices are connected to one another through the Internet, in order
5 to provide a certain device in the home network with a service, and includes a database that stores address information about a home network that subscribes to the service, and information about a service recipient device within the home network. The system transmits a notifying message to the service recipient device prior to providing the service to confirm whether the service
10 recipient device can receive the service or not, and provides the service recipient device with the service after receiving an affirmative response from the service recipient device.
